

# Making Library Management Easier with Data-Driven Insights

Your library's WiFi network is a treasure trove of useful information. Who's On My WiFi gathers that information and provides it back to your team in easy-to-understand reports that are packed full of insights. These insights make it simple to convey the story of your library's community impact and make data-driven decisions about everything from staffing to programming and more.

## Tell Your Library's Story

Prove the impact your library and its programming has on the community with insight into how many people attend your programs, how many people return to your library, and more.

## Make Decisions with Confidence

With valuable information about how your library is being utilized, you can be confident in your decisions about how to staff your location(s), which programming to run and when to run it, and how to attract new or returning visitors.

## Keep Existing Hardware

Who's On My WiFi is the only library-centric solution that will work on existing infrastructure. There's no need to replace your current routers or access points as our technology is not vendor specific.

## Understand Your Information

Who's On My WiFi software is designed with the average user in mind, so you don't have to be an IT whiz or mathematician to understand your information. Your reports are easy to access and presented in way that's easily interpreted.

## Respect Patron Privacy

All reports and statistics provided respect the privacy of your patrons, and are generated without requiring or storing their personally-identifying information.

## Report Required Data

Who's On My WiFi is the leading provider of wireless session-count reports for libraries, making it easier than ever to report this required information on the Public Library Survey.
